## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/17/04 has been entered.

### ***Claim Objections***

2. Claim 13 is objected to because of the following informalities: in line 5, "polytutadiene" should be corrected to --polybutadiene--. Appropriate correction is required.

### ***Allowable Subject Matter***

3. The indicated allowability of claims 13, 15, 17 and 18 is withdrawn in view of the newly discovered reference(s) US 5,286,418 to Nakamura et al. (Nakamura). Rejections based on the newly cited reference(s) follow.

4. Claims 1-12 are allowed.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 15, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,286,418 to Nakamura et al. (Nakamura). Nakamura discloses a polarizing film comprising a hydrophobic polymer containing a dichroic organic colorant in an oriented state, wherein the polarizing film has excellent light resistance (i.e. the dye is chemically stable with respect to light). See the abstract and column 62, lines 7-9. Additionally, the polymer is exemplified by polyethylene terephthalate (i.e. an aromatic polyester), and the colorant is exemplified by azo dyes. See the abstract; column 6, lines 63-66; and Colorant No. 1-41 to 1-48.

Although the dichroic organic colorant of Nakamura is not ordered by activating light illumination as in the present invention, it is photochemically stable and formed within a matrix of polymeric material, therefore it meets the limitations of the presently claimed polarizing material.
